Title of the talk which can span over more lines

First Author[1], Second Author[1,2] and Last Author[2]

[1]Department of Materials Science, Montanuniversität Leoben, Austria
[2]Name of the second institution, City, Country

name.surname@unileoben.ac.at

Name of the Conference
1 January 2026

Text and highlighting

- important content is highlighted with `\alert{…}`
- less important content is highlighted with `\Alert{…}`
- The MUL display font (Funnel Display) is switched on with `\funneldisplay`; it is used for the frame titles
- mathematics works as usual: $a^2 + b^2 = c^2$, $\sin\alpha = \frac{b}{c}$

Lists

By default, list items are uncovered one by one (<+-> is the class default):

- first level items have squares

Use `\begin{itemize}[<1->]` to show all items at once:

- all
- at
- once

Overlays

- `\only<2>{…}`: content exists on slide 2 only (takes no space otherwise)
- `\uncover<3->{…}`: space for the content is always reserved, the content is shown from slide 3 on

Figures and literature

- figures are kept in the folder `figs`, graphics (logos, background) in `graphics`
- images are included with `\includegraphics{figs/…}`; these demo figures are TikZ drawings included with `\input`
- `\literature{…}` (outside a frame) prints references above the footer of this and all following slides; clear it with `\literature{}`

A. Author, B. Author, and C. Author, *J. Example Sci.* **1**, 1 (2026)
D. Author and E. Author, *Example Lett.* **2**, 100 (2025)

Placing objects with `overdraw`

- the `overdraw` environment is a TikZ picture with absolute coordinates: one unit is 1/16 of the slide width, the origin is the bottom-left corner of the slide (right of the sidebar, if shown)
- `\framegrid` inside `overdraw` draws the coordinate grid for finding positions (slide 2) – remove it in the final version
- slide 3: label and arrow placed with `overdraw`

Hidden results

- `\showResults{…}` shows its content with the class option `showResults` (default), and leaves an empty space of the same size with `hideResults`
- useful for exercises in lecture handouts

Exercise

Solve $x^2 - 5x + 6 = 0$.

Result: $x_1 = 2, \quad x_2 = 3$

Backup slide

- slides after `\lastslide` are not counted in the total number of slides
- useful for backup slides
